LAMINATION FILMS

T100 T transparent laminating film is specially designed as thermal adhesion solid for lamination of packaging films made of powder filling. PET is suitable for BOPP, METALIZED PET, METALIZED OPP AL OPA lamination.

T100 Y transparent lamination film is especially suitable for PET, BOPP, METALIZED PET, METALIZED OPP, AL, OPA lamination which has been developed for ketchup, mayonnaise coffee and powder drug packets.

The T100 H transparent laminating film is especially developed for fast, high-performance, high-performance products. It provides fast adhesion at low temperature and high welding resistance.

Increased packaging line speed

Low seal initiation temperature and high hot tack strength.

Lower packaging temperatures

More forgiveness with heat - sensitive products and substrates
Energy savings

Excellent film performance for highly demanding applications

Optics

Good clarity
Low haze
High gloss

More sustainable solutions through downgauging

High dart drop & puncture resistance
