

# TEKNO SUPERPACK

## PACKAGING SOLUTION

### SHRINK FILM

High holding force

High melt strength  
Improved shrink

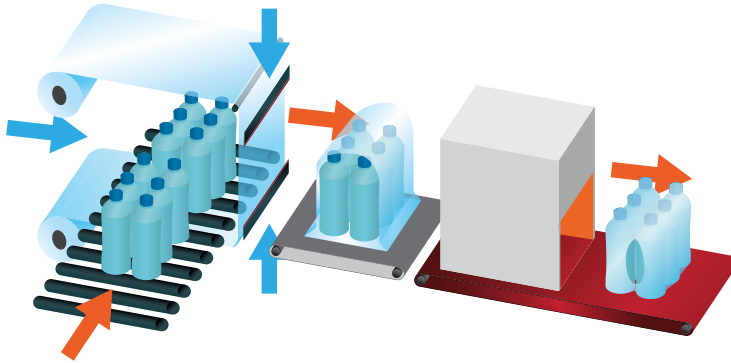

Enhanced optics  
Printability

Sustainability through  
material reduction

## WHAT IS COLLATION

### TEKNO SUPERPACK

1. The individual goods (bottles, cans, cartons, etc.) are put together to multipacks which are ready to be wrapped.
2. The multipack is enveloped in a shrink film.
3. It then passes through a heated shrink tunnel, causing the film to shrink tightly and neatly around the pack.
4. The shrink wrapped multipack exits the shrink tunnel, cools and is ready for handling.
