

A complete range of capabilities

For over 60 years, R.A Jones has been engineering packaging machinery solutions for the beverage industry. Our initial entry into the market was in the mid 1950's with fixed packers. Our experience and technology has since grown rapidly to service multiple beverage industries to include the beer, wine, soda, sport drink, nutritional drink, juice industries. R.A Jones has proven capabilities to align technologies with consumer beverage packaging trends, capable of running cans, glass and plastic bottles and other containers at various speeds and case pack quantities.

A "boardless" partner

R.A Jones creates partnerships that are open and non-limiting for customers, something we feel is advantageous to organizations focused on production line operation flexibility and efficiency. Instead of focusing on negotiating long-term material contracts to secure a return on our investment, we choose to focus on the performance of our machines for revenue generation. This provides our customers with the flexibility to make the decisions they want and when they want, without having to wait for material contracts to expire.

Automatic Magazine Loader (AML)

Integrating an AML into your production line creates many operational and financial efficiencies. R.A Jones has extensive experience with multiple AML systems that will ensure carton loading is consistent, repeatable and from a financial perspective, more efficient and safer than using employees for magazine loading. Our technical support team of engineers has worked with manufacturers to incorporate AMLs onto new machines serving multiple industries, as well as modernizing existing R.A Jones machines already on-site.

After-market parts and service

Properly maintained equipment ensures maximum return on the investment for the life of the machine. It will help reduce capital costs, enable equipment to operate more safely and efficiently, extending the life of the machine. Leverage decades of experience within multiple industries by relying on R.A Jones after-market parts and service to keep your packaging lines running as efficiently as possible.

BEVERAGE MACHINERY

MultiPackers
Wraptror®, Meridian®, and Maxim® Series

Wraptor

Max Speed

250 packs per minute

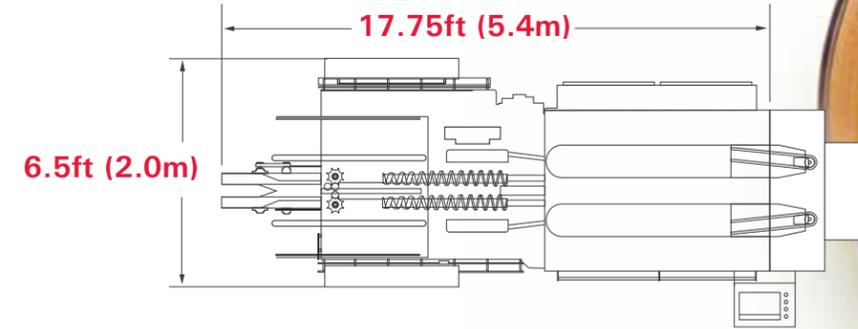

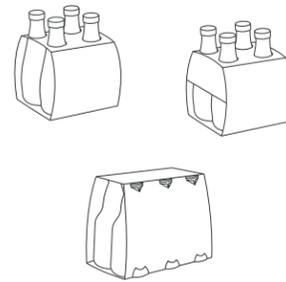

Configurations

Single Tier: 1 to 8+ pack

Unique Features

- Overload protection for transport, overhead wrap control, product metering and product transfer
- Six-foot carton magazine with power feed
- Static locking devices for package closure
- Washdown option

Package Examples

Meridian

Max Speed

210 packs per minute

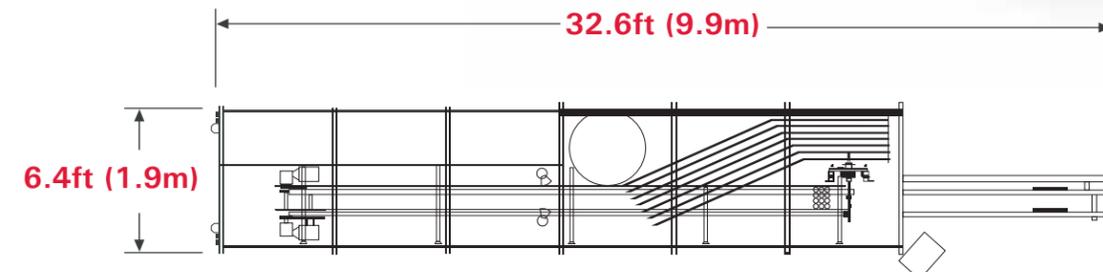

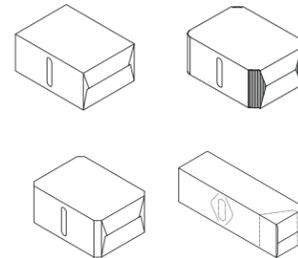

Configurations

Single Tier: 6 to 24 pack

Unique Features

- Can sizes from 8oz. to 16oz.
- Tool-less changeover
- Servo driven dual pitch transport
- Automatic (CIP) chain cleaning and chain oiler system
- Low level magazine option
- Direct load machine (no carton, no load)

Package Examples

Meridian XR

Max Speed

300 packs per minute

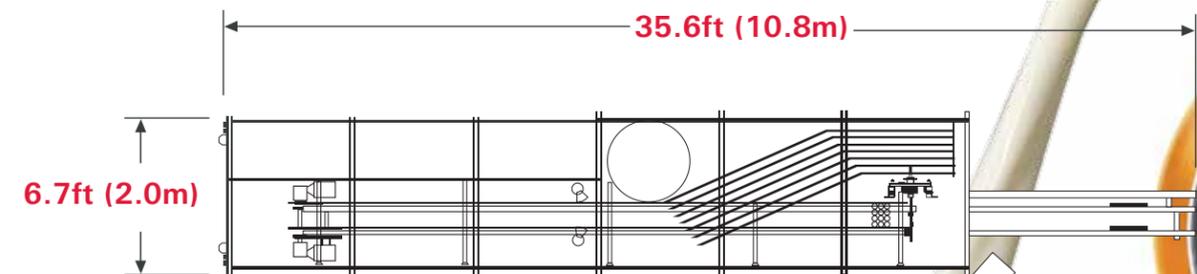

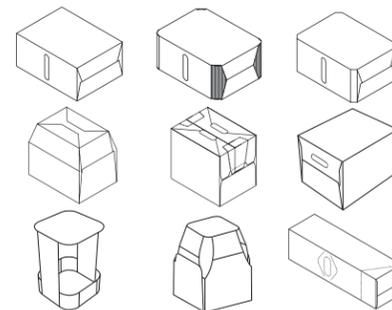

Configurations

Single Tier: 4 to 24 pack

Unique Features

- Same as the Meridian above plus:
- Flexibility to package various product types, diameters and heights in various package styles
 - E-flute cartoning capability
 - Airframe carton opening
 - Tool-less diameter adjusted infeed lane guides

Package Examples

Maxim

Max Speed

Cans: 200 packs per minute
Bottles: 150 packs per minute

Configurations

Single Tier: 6 to 24 pack
Double Tier: 18 to 48 pack

Unique Features

- Airframe carton opening
- E and B-flute cartoning capability
- Partition dividers for glass
- Slip sheet dividers for cans
- Quick disconnect transport lugs
- Walk-in frame with interlocked sliding guard doors

Package Examples
